

***Position: RF (Project) Engineer, Military/Government Division**

For consideration, an individual should have a minimum experience of 5-7 years in the RF design, test and build process regarding antennas or their associated components; especially in HF, VHF, UHF and multiple GHz. areas. A BSEE minimum preferred. Ability to work on multiple tasks with attention to detail is a MUST. Experience in organic design, analysis through production is a key aspect of this position. Ability to facilitate antenna test procedures and disseminate corresponding data is required. Knowledge of HP or Tektronix test equipment, anechoic chambers, HFSS or MININEC software required. This candidate must also be able to understand AutoCAD drawings from concept to build.

***The candidate chosen may be subject to a government security investigation in order to meet the requirements necessary to obtain a government security clearance.**
